

2015 Quality Measures Guide

This guide will help you understand how to affect the Quality Measures in Chiro QuickCharts. Each measure is shown with the CMS definition and the data elements that cause it to count.

The measures are defined by CMS and are not a product of Chiro QuickCharts. The coding that must be applied to each diagnosis and/or treatment is defined by the creator of the measure, not by CQC.

You can download the complete definitions from our website at <http://www.quick-charts.com/resources>

CMS 50 V2 -- Closing the referral loop: receipt of specialist report	
Name	Closing the referral loop: receipt of specialist report
Version	2
Initial Patient Population	Number of patients, regardless of age, who were referred by one provider to another provider, and who had a visit during the measurement period.
Numerator	Number of patients with a referral, for which the referring provider received a report from the provider to whom the patient was referred., Exclusions: Not Applicable
Denominator	Equals Initial Patient Population, Exceptions: None, Exclusions: None

QuickCharts uses the referral fields on the patient. The measure counts the number of people with non-blank Referred To: fields as the denominator. The numerator is any of the patients in the denominator who have a non-blank Referral Response.

Reminder Fmt: Email

Referred On: 12/15/2015 Referred?

Ref Reason:

Referred To: Dr. Best

Ref Response: Letter from Dr. Best on file

Meaningful Use Checklist

CMS65 V3 -- Hypertension: Improvement in Blood Pressure	
Name	Hypertension: Improvement in Blood Pressure
Version	3
Initial Patient Population	All patients aged 18-85 years of age, who had at least one outpatient visit in the first six months of the measurement year, who have a diagnosis of hypertension documented during that outpatient visit, and who have uncontrolled baseline blood pressure at the time of that visit
Numerator	<p>Patients whose follow-up blood pressure is at least 10 mmHg less than their baseline blood pressure or is adequately controlled.</p> <p>If a follow-up blood pressure reading is not recorded during the measurement year, the patient's blood pressure is assumed "not improved.",</p> <p>Exclusions: Not Applicable</p>
Denominator	<p>Equals Initial Patient Population,</p> <p>Exceptions: None,</p> <p>Exclusions: Exclude from the denominator all patients with evidence of end-stage renal disease (ESRD) on or prior to December 31 of the measurement year. Documentation of dialysis or renal transplant also meets the criteria for evidence of ESRD.</p> <p>Exclude from the denominator all patients with a diagnosis of pregnancy during the measurement year.</p>

High for this measure is a reading of 140 or more for diastolic. Hypertension DX codes are listed in under 'Hypertension' in the DX value list. The exclusions are listed in the 'Pregnancy', 'EndStageRenalDisease', 'Hemodialysis', 'PeritonealDialysis', 'RenalTransplant' lists.

QuickCharts compares the earliest visit in the measurement period that has BP recorded with the most recent visit with BP recorded. If the date difference is greater than or equal to six months and the initial reading is more than 10 points lower, or the reading is less than 140, the visit counts in the numerator. Either

CMS 68 V3 -- Documentation of Current Medications in the Medical Record	
Name	Documentation of Current Medications in the Medical Record
NQF	0419
Initial Patient Population	All visits occurring during the 12 month reporting period for patients aged 18 years and older before the start of the measurement period
Numerator	Eligible professional attests to documenting, updating or reviewing the patient's current medications using all immediate resources available on the date of the encounter. This list must include ALL known prescriptions, over-the-counters, herbals and vitamin/mineral/dietary (nutritional) supplements AND must contain the medications' name, dosages, frequency and route of administration, Exclusions: Not Applicable
Denominator	Equals Initial Patient Populations, Exceptions: Medical Reason: Patient is in an urgent or emergent medical situation where time is of the essence and to delay treatment would jeopardize the patient's health status, Exclusions: None

This measure looks for visits with a Med Reconciliation Done entry in treatments for the patient. That entry must have a Snomed or CPT code from the 'MedReconDone' list within parenthesis. The check box on the patient is not enough, it must be a treatment code from the list for patients over 18 on a visit within the measurement period.

CMS69 V2 -- Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up	
Name	Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up
NQF	0421
Initial Patient Population	<p>There are two (2) Initial Patient Populations for this measure NOTE: The most recent quality code submitted will be used for performance calculation.</p> <p>Initial Patient Population 1: All patients 65 years of age and older before the beginning of the measurement period with at least one eligible encounter during the measurement period NOT INCLUDING encounters where the patient is receiving palliative care, refuses measurement of height and/or weight, the patient is in an urgent or emergent medical situation where time is of the essence and to delay treatment would jeopardize the patient's health status, or there is any other reason documented in the medical record by the provider explaining why BMI measurement was not appropriate.</p> <p>Initial Patient Population 2: All patients 18 through 64 years before the beginning of the measurement period with at least one eligible encounter during the measurement period NOT INCLUDING encounters where the patient is receiving palliative care, refuses measurement of height and/or weight, the patient is in an urgent or emergent medical situation where time is of the essence and to delay treatment would jeopardize the patient's health status, or there is any other reason documented in the medical record by the provider explaining why BMI measurement was not appropriate</p>
Numerator	<p>Patients with a documented BMI during the encounter or during the previous six months, AND when the BMI is outside of normal parameters, a follow-up plan is documented during the encounter or during the previous six months of the encounter with the BMI outside of normal parameters.,</p> <p>Exclusions: Not Applicable</p>
Denominator	<p>Equals Initial Patient Population,</p> <p>Exceptions: None, Exclusions: Patients who are pregnant.</p>

This measure counts patients with a documented BMI. If the BMI is low or high, the numerator counts those with a treatment coded from the 'AboveNormBMI', 'BelowNormBMI' or 'WeightAssessment' lists.

Normal BMI for Population 1 is 23.0 to 29.0. Normal for population 2 is 18.5 to 25.0. Ages for the populations are tested using the start date of the period as the date to check.

CMS 138 V2 -- Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention	
Name	Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention
NQF	0028
Initial Patient Population	All patients aged 18 years and older
Numerator	Patients who were screened for tobacco use at least once within 24 months AND who received tobacco cessation counseling intervention if identified as a tobacco user, Exclusions: Not Applicable
Denominator	Equals Initial Patient Population, Exceptions: Documentation of medical reason(s) for not screening for tobacco use (eg, limited life expectancy, other medical reason), Exclusions: None

This measure compares the number of patients over 18 that have been seen twice to the same number that have admitted smoking in the last two years. Admitted smokers must also have a treatment coded with a code from the 'SmokingCounseling' group.

CMS 139 V2 -- Falls: Screening for Future Fall Risk	
Name	Falls: Screening for Future Fall Risk
NQF	0101
Initial Patient Population	Patients aged 65 years and older with a visit during the measurement period
Numerator	Patients who were screened for future fall risk at least once within the measurement period, Exclusions: Not Applicable
Denominator	Equals Initial Patient Population, Exceptions: Documentation of medical reason(s) for not screening for fall risk (e.g., patient is not ambulatory), Exclusions: None

All patients 65 or older on the start date of the period. The numerator is that same group with a treatment coded from the 'FallsScreening' list.

CMS 155 V2 -- Weight Assessment and Counseling for Nutrition and Physical Activity for Children and Adolescents	
Name	Weight Assessment and Counseling for Nutrition and Physical Activity for Children and Adolescents
NQF	0024
Initial Patient Population	Patients 3-17 years of age with at least one outpatient visit with a primary care physician (PCP) or an obstetrician/gynecologist (OB/GYN) during the measurement period
Numerator	Numerator 1: Patients who had a height, weight and body mass index (BMI) percentile recorded during the measurement period Numerator 2: Patients who had counseling for nutrition during the measurement period Numerator 3: Patients who had counseling for physical activity during the measurement period, Exclusions: Not Applicable
Denominator	Equals initial patient population, Exceptions: None, Exclusions: Patients who have a diagnosis of pregnancy during the measurement period

This measure has three numerator comparisons and three stratifications. The measure stratifications are the entire range, 3-18, with measures for 3-11 and 12-18. Each of the stratifications by age use the same numerator break outs.

The first numerator is patients with height, weight and BMI recorded on a visit during the period. The second tests for treatments coded from the 'CounselingNutrition' value set. The third test for treatments from the 'CounselingPhysicalActivity' value set.

CMS 165 V2 -- Controlling High Blood Pressure	
Name	Controlling High Blood Pressure
NQF	0018
Initial Patient Population	Patients 18-85 years of age who had a diagnosis of essential hypertension within the first six months of the measurement period or any time prior to the measurement period
Numerator	Patients whose blood pressure at the most recent visit is adequately controlled (systolic blood pressure < 140 mmHg and diastolic blood pressure < 90 mmHg) during the measurement period., Exclusions: Not Applicable
Denominator	Equals Initial Patient Population, Exceptions: None, Exclusions: Patients with evidence of end stage renal disease (ESRD), dialysis or renal transplant before or during the measurement period. Also exclude patients with a diagnosis of pregnancy during the measurement period.

This measure looks for patients 18-85 with a diagnosis coded from the 'EssentialHypertension' code set. There are exceptions. Any patient with a diagnosis from the 'Pregnancy', 'EndStageRenalDisease', 'Hemodialysis', 'PeritonealDialysis', or 'RenalTransplant' code sets are excluded.

The numerator counts the patients whose blood pressure is under 140 systolic and under 90 distolic.

CMS 166 V3 -- Use of Imaging Studies for Low Back Pain	
Name	Use of Imaging Studies for Low Back Pain
NQF	0052
Initial Patient Population	Patients 18-50 years of age with a diagnosis of low back pain during an outpatient or emergency department visit
Numerator	Patients without an imaging study conducted on the date of the outpatient or emergency department visit or in the 28 days following the outpatient or emergency department visit, Exclusions: Not Applicable
Denominator	Equals Initial Patient Population, Exceptions: None, Exclusions: Exclude patients with a diagnosis of cancer any time in their history or patients with a diagnosis of recent trauma, IV drug abuse, or neurologic impairment during the 12-month period prior to the outpatient or emergency department visit. Exclude patients with a diagnosis of low back pain within the 180 days prior to the outpatient or emergency department visit.

This measure counts patients between 18 and 50 that have a diagnosis coded from the 'LowBackPain' code set. The numerator counts those with a Radiology procedure coded from the 'CTScan', 'MRI', or 'XRayLowerSpine' code sets.

The exceptions include any patient with a diagnosis coded from the 'IVDrugUse', 'NeurologicImpairment', 'Trauma', 'AllCancer', 'AllCancerResolved', or 'AllCancerInactive' code sets.

Code Sets

Value Set Name	Code Type	Codes
